### Keywords

Firmware, Upgrade, Installation, RICOH, Caplio, 500SE, GPS, Modul

### Symptom (öffentlich)

I have downloaded the latest firmware- and software versions for the GPS module (Se2), but I do not know how to install it .

### Problem (öffentlich)

For the installation of the firmware you have to follow some installation steps.

### Solution (öffentlich)

Please download the latest firmware for the Se2.c GPS module and the EKA software "SE2GC Control Center" as a zip archive. You can find the zip-files ready for download within the FAQ's "Current firmware and software versions for the Ricoh Caplio 500 SE and modules" Ensure that you download the correct archive.

Thereafter please follow the following steps:

- Unzip the folder"SE2GC\_software\_und\_firmware.zip"
- Unzip the folder „SE2GC software 1.6.zip“
- Run the setup.exe to install the SE2GC Control Center.
- To start the software go to the Start menu and start "Eka Technologies" > "SE2GC Control Center".
- Unzip the folder„SE2GC firmware 10.65.zip“ into a desired folder. Than you are able to embed the"se2gc.hex" file within the Control Center.
- To update the firmware, start the camera and connect the SE2GC GPS module to the computer.
- Please use the right USB port on the GPSmodule (There is NO camera icon displayed on).
- To ensure a well working process, we recommend to connect no more mass storage devices to the PC .
- When the module is detected by the PC, all functions will be activated automatically in the Control Center.
- Press the „Update“-button and select the "se2gc.hex" file to start the update.
- The update process starts automatically and usually takes 1-2 minutes.
- During the process, the indicator on SE2GC modul lights red.
- Please do not remove the cable during the operation.
- If the operation was completed successfully, please disconnect the camera and turn it off.
- Connect the GPS module again with the PC and start the "SE2GC Control Center".
- Select for the Device Mode now SE-1/SE-3 (Legacy) Mode and press Apply
- Disconnect the camera and turn it off.
- The SE2GC module is now upgraded and ready for use.

Do not forget to upgrade also the firmware for your Ricoh Caplio 500 SE camera!!
